

FYG Evidence Based Model Portfolios

versus

Index and Active Portfolio Management

July 2020

Introduction

The purpose of this paper is to provide readers with a brief explanation of three investment portfolio management processes and a set of data that highlights the performance of each process of various time periods. FYG Planners Pty Ltd believe the data provided should be helpful to investors wanting to compare the historical results achieved by each investment management process.

Active investment management involves adopting an approach to managing investment assets that sees the individual or investment professionals backing their opinion about the future performance of a market, market sector or individual security. It is the predominant investment process used today around the world.

History has shown active management to be less than optimal in the longer term with well over 50% of active funds delivering returns below their most relevant index over longer periods of time. History has also shown that over time investors have been generally unsuccessful at selecting "future" superior performing managed investments. Studies in the USA by independent research firm Dalbar Inc. have also regularly shown investor returns rarely match financial market returns due to poor investment timing decisions.

Index portfolio management involves, generally an institution, modelling their portfolio on a pre-determined, usually externally designed, group of securities, known as an index. e.g: All Ordinaries, Dow Jones or MSCI. These portfolio's are passively managed and "track" the relevant index deliberately.

The Asset Class portfolio's recommended by FYG Planners are based on a few academically accepted principles, from some of the worlds leading finance experts, such as those noted below:

Genuine Diversification Reduces Risk - Harry Markowitz 1952 (Nobel Prize Winner)

Cost of Capital is the Investors Expected Rate of Return - Merton Miller 1961 (Nobel Prize Winner)

Risk & Return are Related - William Sharpe 1964 (Nobel Prize Winner)

Equity Markets are Efficient - Professor Eugene Fama 1966 (Nobel Prize Winner)

Small Cap Stocks outperform Large Cap Stocks but with Greater Volatility - Rolf Banz, University of Chicago 1981

Asset Allocation rather than Stock Selection and Market Timing Dominate Investment Performance - Garry Brinson, Randolph Hood and Gilbert Beebower 1983 & 1991 study of 91 major pension funds in the USA.

Distressed Stocks (High Book to Market) Outperform Healthy Stocks (Low Book to Market) - Professor Eugene Fama and Professor Kenneth French, University of Chicago 1992

Based on the above academic foundations, FYG Planners Pty Ltd have compiled this report from an Australian perspective to compare:

- 1) Our highly structured Asset Class equity portfolios with the Australian All Ordinaries Index and a composite of MSCI World Market Index Unhedged & Hedged Indices.
- 2) Our Asset Class moderate, balanced and growth portfolios with index based portfolios using the same asset allocation benchmark.
- 3) Our balanced and growth portfolios with the most comparable wholesale balanced and growth funds offered by some of Australia's largest investment management institutions.

We believe the long term results are so consistent and the evidence so compelling that we only recommend investors adopt this approach to investing. For further information we recommend that you read our more comprehensive "Investment Philosophy" before deciding to invest.

NB: You should also read very carefully the qualifying notes that follow the quantitative data in order to understand the limitations of this document.

Qualifying Comments

- 1) The Asset Class portfolio includes holdings of 50% Large Cap stocks, 30% Value stocks and 20% Small Cap stocks using our preferred investment manager. Returns shown are before investment management, administration or advice fees.
- 2) The Market Index Portfolio in this table is the S&P/ASX All Ordinaries Index (Total Return) ignoring any investment or trading costs.
- 3) Standard deviations shown indicates the Asset Class Portfolio to be less variable where the "Standard Deviation Difference" column is a positive number noted in blue. If the figure is Red then the portfolio is more variable.
- 4) The investment return data series has been calculated using a software program provided by Dimensional Fund Advisers (Aust) Ltd. The software is called "The Returns Program". FYG Planners Pty Ltd believe the data series to be accurate but do not accept any responsibility for any inaccurate data calculated by the Returns Program.
- 5) The investment returns shown above are historical and in some cases have been simulated from the most appropriate market data. Future investment returns may bear no resemblance to past returns as financial market returns may be very different as may be the rate of inflation in future.
- 6) Investment returns for the Asset Class portfolio take into account past structural changes made by FYG Planners Pty Ltd to our standard model portfolios.
- 7) Monthly data points and Annual rebalance data are used to produce this report.

Qualifying Comments

- 1) The Asset Class Portfolio returns represent the historical results of the FYG Planners Pty Ltd 30/70 model portfolio over the relevant period and include any structural changes introduced by the FYG Investment Committee.
- 2) The Market Index Portfolio includes the results of:
 - 5% Bloomberg AusBond Bank Bill Index
 - 25% Bloomberg AusBond Composite 0+ Yr Index
 - 10% S&P/ASX 300 A-REIT Index (Total Return)
 - 35% S&P/ASX All Ordinaries Index (Total Return)
 - 12.5% MSCI World Idx & 12.5% MSCI World Idx (hedged to AUD)
- 3) Standard deviations shown indicates the Asset Class Portfolio to be less variable where the "Standard Deviation Difference" column is a positive number noted in Blue. If the figure is Red then the portfolio is more variable.
- 4) The investment return data series has been calculated using a software program provided by Dimensional Fund Advisers (Aust) Ltd. The software is called "The Returns Program". FYG Planners Pty Ltd believe the data series to be accurate but do not accept any responsibility for any inaccurate data calculated by the Returns Program.
- 5) The investment returns shown above are historical and in some cases have been simulated from the most appropriate market data. Future investment returns may bear no resemblance to past returns as financial market returns may be very different as may be the rate of inflation in future.
- 6) Monthly data points and Annual rebalance data are used to produce this report.

Qualifying Comments

- 1) The Asset Class Portfolio returns represent the historical results of the FYG Planners Pty Ltd 30/70 model portfolio over the relevant period and include any structural changes applied by the FYG Investment Committee.
- 2) The performance of the wholesale funds offered by each institution have been grossed up by their management expense rate in order to compare pre-fee returns in all data.
- 3) Wholesale product performance data was provided by Morningstar Research. Whilst the data is believed to be reliable, FYG Planners Pty Ltd takes no responsibility for inaccuracies in the Morningstar data.
- 4) The investment return data series has been calculated using a software program provided by Dimensional Fund Advisers (Aust) Ltd. The software is called "The Returns Program". FYG Planners Pty Ltd believe the data series to be accurate but do not accept any responsibility for any inaccurate data calculated by the Returns Program.
- 5) The investment returns shown above are historical and in some cases have been simulated from the most appropriate market data. Future investment returns may bear no resemblance to past returns as financial market returns may be very different as may be the rate of inflation in future.
